

OUR URESTONE PANELS CAN BE USED FOR ANY COMMERCIAL OR RESIDENTIAL APPLICATION.

Replications Unlimited offers the most realistic textures because they are molded from real stone, brick, wood and a variety of other textures. Furthermore, our textures utilize deeper stones and are produced in larger panel sizes than our competition.

The URESTONE Panels can be used for any interior or exterior application ranging from displays, building exteriors, wine cellars, outdoor kitchens, residential, store and restaurant interiors and many other applications.

OUR BENEFITS

- Extremely realistic appearance.
- Easy installation - No masonry skills needed
- Cuts applied like plywood
- Simple interlocking panels makes installation quick
- Designed for interior or exterior applications
- Panels are lighter than 1/2" plywood (32-40 lbs.)
- Increases insulation value

What is Urestone?

URESTONE is based on a innovative Dual Layer Composite system. The surface layer is a durable impact resistant plastic layer that is also used to produce automotive car bumpers. This layer is followed by a low density foam system which provides thickness and insulation value. The end result is a system that is tough and is the most authentic replication of a stone panel in both appearance and texture available on the market today. Breathtakingly beautiful!

Easy Installation.

Unlike real stone (or cultured stone) which requires several stages and specialized stone mason's labor to install, URESTONE panels installs easily and quickly with screws and/or adhesives . The only tools required are a drill (used as a screw-driver) and any wood type saw for trimming to exact fit. "Anyone that knows how to use these simple tools can easily install several hundred square feet in a day!"

Durability / Strength

Don't let the weight fool you! This lightweight panel (approximately 36 lbs.) is so strong and durable, due to the unique Dual Layer composite, that even a weed trimmer will not damage the surface. The solid tough impact resistant plastic layer resistant to damage unlike competitive synthetic faux stone systems that are more easily dented and scratched. URESTONE can also be installed below grade! With the moisture resistance, even backfilling is ok. "Our panels are the strongest surface in the industry!"

Interlocking Design

The URESTONE panels have incorporated an "interlocking" design for corners and main panels that allow fast installations and have been engineered to have the seams to blend together thus, eliminating the visibility of any vertical seams – when properly installed. "The interlocking system virtually eliminates all vertical seams!"

Light Weight

The weight of the URESTONE 4ft x 8ft panels are 36 lbs. (less than a sheet of plywood). This light weight panel allows for easy handling and installation. "What more can you ask for than a 'light-weight' building product?"

weight: 32 lbs thickness: 1 3/4"

Due to the positive response of the 42" x 8ft Ledgestone wainscot panel with built in top trim, we have decided to develop two more patterns by fall 2012. The contractors like these wainscot panels because they can install them around a 60 ft x 60 ft building in less than 2 days with 2 installers.
